L-style

style

Bringing darts to a whole new Level

There are many beautiful words starting with the letter “L”.

L-style’s brand name was thought of with the wish to bring peace and love to the world we live in. A portion of our sales is donated to dart associations such as the PDJ or the JSFD to support their dart activities and also to support people who need assistance around the world. It would be fantastic to see the whole dart industry being revolutionized through the latest technology from Japan.

L-style Jinta Serizawa

At L-style we are putting all our effort into developing products that are both perfect in functionality and in appearance.

Golf clubs, Billiard cues, soccer balls, running shoes have all evolved greatly together with the athlete’s skills and we believe it should be the same with darts. So, what kind of dart products can players truly rely on?

We believe those products should resemble flights that always hold a 90 degree angle, products that don’t break or tear easily, tips that do not bounce out or loosen and products that will not interfere with the players focus. When a player can rely on his/her equipment, it will have a positive impact during a decisive throw.

On top of a reliable product, if we can add in some sexiness and coolness in the design, it is even better! Unfortunately there is no such thing as a product that will make you play better on its own... for that you need to keep practicing and keep brushing up your techniques. Let's enjoy darts!

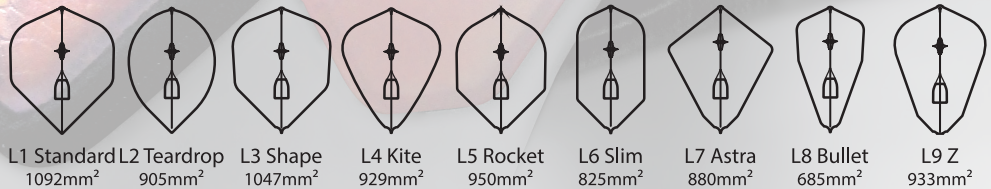

FLIGHT

Flight-L features
Bits of knowledge

Flight surface areas

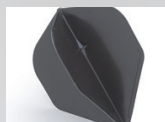

The flight shape (surface area) will dictate the stability and path of your throw. If you get to know the flight surface area, it will make it easier to find your perfect flight.

Will maintain a precise 90 degree angle. It's lightweight and durable 1 piece molded flight.

Will keep open at a 90 degree angle

The star shaped design in the middle of the flight helps the flight being kept open at a 90 degree angle at all times which helps on the stability of the dart throw.

Lightweight and durable 1 piece molded flight

This is the first of its kind 1 piece molded flight. Very lightweight and durable which can be used longer than a typical paper flight.

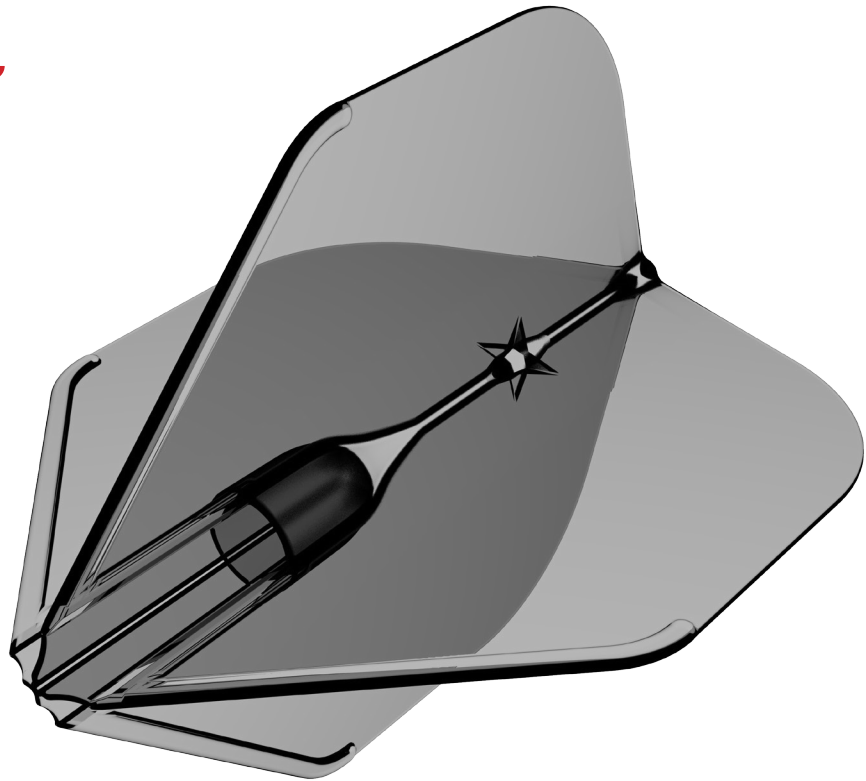

Easy to insert on the shaft/stem

Due to the special processing of the tip of the flight, it is easier to insert the flight on the shaft.

Other advantages

There is a flight guard pre-molded into the back of the flight. Since this is a one piece molded flight, it is not possible to robin-hood the flight thus making sure each dart will score.

Increased longevity of the flight due to the pre-molded flight guards

Easy insertion of the flight

Extreme Durability

"L-Shaft" is one of our masterpiece that proudly represents the L of L-style. Its first feature is the wide open prongs that allow anybody, whether in a dark setting, with nervous hands or just with too many drinks you can still insert the flight easily. It will hold the flight tightly but will allow it to pop off when necessary during tight grouping. The 2nd feature is the flight guard that will protect the most vulnerable area of the flight, the bottom edge of the flight. With this, the longevity of the flight is drastically improved. The durability of the shaft itself has always been valued highly but now, the L-Shaft aims even more to allow players to totally focus on their game, removing any other incertitude related to a dart accessory.
